1 [A functional approach to generation with TAG](#)

Kathleen F. McCoy, K. Vijay-Shanker, Gijoo Yang

 June 1992 **Proceedings of the 30th annual meeting on Association for Computational Linguistics**

Publisher: Association for Computational Linguistics

Full text available: pdf(807.91 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)
[Publisher Site](#)

It has been hypothesized that Tree Adjoining Grammar (TAG) is particularly well suited for sentence generation. It is unclear, however, how a sentence generation system based on TAG should choose among the syntactic possibilities made available in the grammar. In this paper we consider the question of what needs to be done to generate with TAGs and explain a generation system that provides the necessary features. This approach is compared with other TAG-based generation systems. Particular atten ...

2 [A Ranking model of proximal and structural text retrieval based on region algebra](#)

Katsuya Masuda

 July 2003 **Proceedings of the 41st Annual Meeting on Association for Computational Linguistics - Volume 2 ACL '03**

Publisher: Association for Computational Linguistics

 Full text available: pdf(180.44 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

This paper investigates an application of the ranked region algebra to information retrieval from large scale but unannotated documents. We automatically annotated documents with document structure and semantic tags by using taggers, and retrieve information by specifying structure represented by tags and words using ranked region algebra. We report in detail what kind of data can be retrieved in the experiments by this approach.

3 [Improving statistical language model performance with automatically generated word hierarchies](#)

John G. McMahon, Francis J. Smith

 June 1996 **Computational Linguistics**, Volume 22 Issue 2

Publisher: MIT Press

Full text available: pdf(2.02 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)
[Publisher Site](#)

An automatic word-classification system has been designed that uses word unigram and bigram frequency statistics to implement a binary top-down form of word clustering and
